

DATA ELEMENTS

I. Data Elements Involved

Data elements involved in the project are amassed from 24 data tables extracted from NH Bridges through the Enterprise Data Warehouse (EDW). These tables may be divided into five categories around:

- Referrals
- Case and Case Information
- Service and Placement Information
- Client Information and Relations
- Code Key Information

What follows is a listing of the tables and a brief description of its contents organized within the five categories laid out above.

Table Name	Table Description	Table Category
	IAM Risk Assessment.	Referrals
	IAM 24 Hour Safety Assessment.	Referrals
	IAM Safety Review.	Referrals
	This table contains allegation information connected with a specific Referral.	Referrals
	This table contains information on the contacts made with all of the clients and collaterals during the Referral Assessment process.	Referrals
	This table contains information collected during the Assessment investigation.	Referrals
	This table contains information about the alleged perpetrator associated with a Referral allegation.	Referrals
	This table contains information about each client in a specific Referral.	Referrals
	This table contains information around family identified in the referral.	Referrals
	This table contains information about a DCYF referral -- abuse/neglect, CHINS, or I&R.	Referrals
	This table provides information about the clients that are involved in a given case.	Case and Case Information
	This table contains information about contacts made by the worker with any client or collateral in the case.	Case and Case Information
	This table maintains the dates and reasons for each case opening and closing.	Case and Case Information
	This table provides information about each DCYF case.	Case and Case Information

	This table maintains information on the participants of a case contact.	Case and Case Information
	This table contains historic information about a child's unpaid placements.	Service/Placement
	This table contains information on all of the occurrences of the child's being removed from his home by DCYF.	Service/Placement
	This table holds the information about authorizations for a resource to provide services to a child at a specified rate, number of units and time frame, the generation of which initiates the claims process.	Service/Placement
	This table provides information about specific Medicaid service types authorized.	Service/Placement
	Households for which IAM tools are completed.	Client Information and Relationships
	This table contains information about the client's addresses.	Client Information and Relationships
	This table contains information about the client's relationship with an associated client.	Client Information and Relationships
	This gives information about the individual client	Client Information and Relationships
	This table provides a cross-reference of pick list code values to their long and short description so that other tables can store the code value rather than lengthy narratives. The codes are translated to the narratives on the user interface.	Code Key
